A LONGITUDINAL AND NESTED CASE-CONTROL SURVIVAL MODEL (lccsm.ado)

version 2.2 Roseanne McNamee, Matthew Carr 12oct2013

Development notes

version 2.2 12oct2013
  corrected bug that prevented calculation of empirical Bayes estimates under certain conditions

version 2.1.3 23sep2013
  new warning when the order of variables in the syntax is not appropriate

version 2.1.2 19aug2013
  removed level() option; needs re-working at later date

version 2.1.1 27jul2013
  improved descriptions in help file

version 2.1 31jun2013
  bringing help file up to date

version 2.0 24jun2013
  extended applicability to non-trend based estimates of covariate variance

version 1.1 03mar2013
  previous display ammendments removed (to re-work at a later date) - slowing algorithm down and preventing assessment of functionality at this stage

version 1.0 01feb2013

Tasks

Work on options specified in syntax:

  Specify the number of terms in polynomial function
  Specify the number of controls
  Incoporate facility to specify matching variables
  Extend for continuous time estimation of longitudinal trend
