COLING 2008

The 22nd International Conference on Computational Linguistics

18-22 August, 2008

University of Manchester
England

SPONSORSHIP PROSPECTUS
The Event
Coling is the 22nd International Conference on Computational Linguistics. One of the two most prominent conferences in the field, this is the first time in its 43-year history that it has taken place in the United Kingdom. And where more appropriate than at the University of Manchester, the birthplace of modern computing, and one of the pioneers in computational linguistics in the UK?

We expect an audience of at least 700 participants and possibly as many as 1,000, drawn from academic and industrial organisations across the world. The conference itself consists of four days of parallel paper presentations, and a number of associated specialist workshops and tutorials during the preceding and following weekends. There will also be exhibits and technology demonstrations. The Coling conference is recognised as one of the two major international events in the fields of language technology, computational linguistics and natural language processing; the field is growing constantly, and at the most recent comparable conference, in Prague 2007, the number of delegates was into four figures for the first time. Given its convenient location, Coling 2008 could possibly be the largest-ever international event in the field. It is an event that will be locked in to the calendars of anyone who is serious about cutting-edge developments in the language technologies.

Content
The main sessions of the conference will consist of refereed academic papers on substantial, original, and unpublished research on all aspects of language technology, natural language processing and computational linguistics, including, but not limited to: pragmatics, discourse, semantics, syntax, grammars and the lexicon; phonetics, phonology and morphology; lexical semantics and ontologies; word segmentation, tagging and chunking; parsing, generation and summarization; language modelling, spoken language recognition and understanding; linguistic, psychological and mathematical models of language; language-oriented information retrieval, question answering, and information extraction; machine learning for natural language; corpus-based modelling of language, discourse and dialogue; multi-lingual processing, machine translation and translation aids; multi-modal and natural language interfaces and dialogue systems; applications, tools and resources; and evaluation of systems. We expect there to be approximately 160 papers presented in the parallel main sessions, and a similar number of poster presentations; there will be three or four plenary invited talks by international leaders in the field, and a large number of satellite events.

Venue
Manchester is a city in transformation. The dark satanic mills of Lowry's paintings belong to the 19th and 20th centuries. 21st century Manchester is a city of canalside restaurants and cafes, famous for its cultural and sporting activity as much as its business, science and education. Coling 2008 will take place at the brand new University Place, a purpose-built conference centre, one of several stunning buildings recently built as part of the university's expansion following the merger of UMIST and the Victoria University of Manchester, making it the biggest university in Britain.
Flexible promotional opportunities
The following packages have been tailored to appeal to a wide variety of marketing objectives. However, if there are other ways in which your organisation would like to be involved, we would welcome the opportunity to discuss these with you, and encourage your creative ideas.
