

Hyperspectral radiance data for the scene Ruivães Fern (Nascimento, S.M.C, Amano, K., & Foster, D.H. (2015). Spatial distributions of local illumination color in natural scenes. Vision Research doi:10.1016/j.visres.2015.07.005).

Location name	Ruivães, Vieira do Minho, Portugal
Scene description	Vegetation in the Ruivães area.
Geographic reference points	Scene Latitude 41.674703° Longitude -8.044877°
Date of acquisition	4 June 2003
Acquisition times	16:20
Viewing geometry	<p>Visual angle of scene from camera: 6.9×5.3 deg</p> <p>Distance of the camera to flat reference: 3.2 m</p>
Matlab Files	Ruivaes_Fern.mat
BMP Files	Ruivaes_Fern.bmp unedited
How to load data	In Matlab, if hyperspectral image files are in working directory, then Matlab command <code>>> load ('Ruivaes_Fern.mat')</code> loads hyperspectral image data into memory with name 'hs1', same for every scene
What the data represent	Array 'hs1' has size $1024 \times 1344 \times 33$. It represents a set of 33 greyscale images of size 1344 (H) $\times 1024$ (V) pixels sampled at wavelengths 400, 410, ..., 720 nm, with each pixel value representing spectral radiance in $\text{W m}^{-2} \text{ sr}^{-1} \text{ nm}^{-1}$
Postprocessing	See Section 2.1. Hyperspectral system, in Nascimento, S.M.C, Amano, K., & Foster, D.H. (2015). Spatial distributions of local illumination color in natural scenes. Vision Research doi:10.1016/j.visres.2015.07.005.
Matlab version	R2014b (8.4.0.150421).
More details	See Nascimento, S.M.C, Amano, K., & Foster, D.H. (2015). Spatial distributions of local illumination color in natural scenes. Vision Research doi:10.1016/j.visres.2015.07.005.
Usage and citation	These data are for personal use only. If you use these hyperspectral images or the colour images rendered from them in any published work arising from these data, please cite the source publication in full: Nascimento, S.M.C, Amano, K., & Foster, D.H. (2015). Spatial distributions of local illumination color in natural scenes. Vision Research doi:10.1016/j.visres.2015.07.005.
