

City-Region 2020

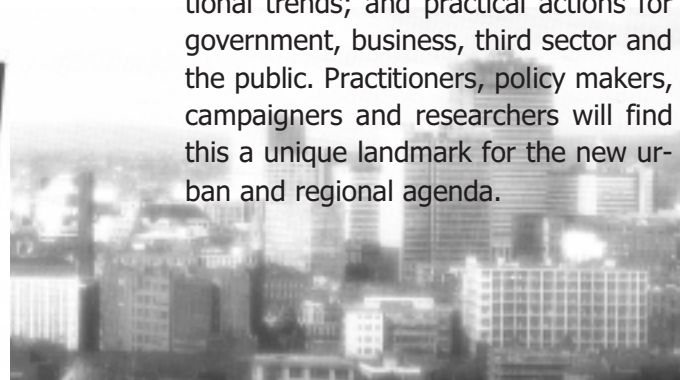

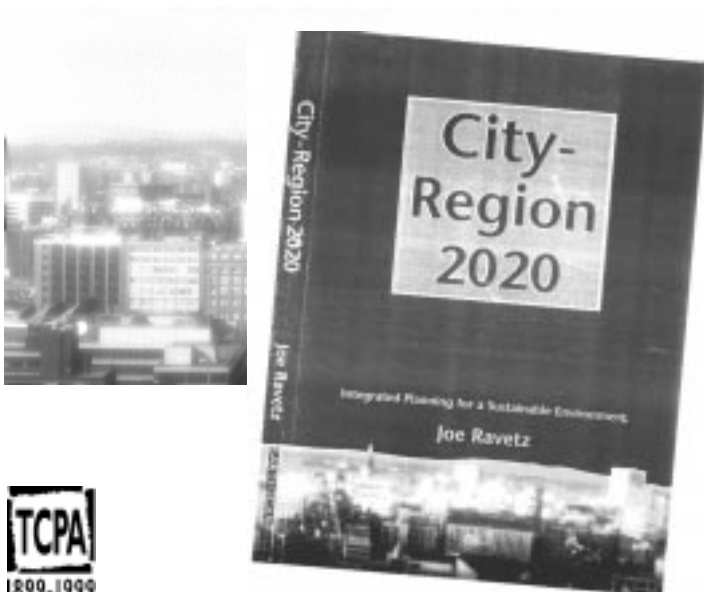

Integrated Planning for a Sustainable Environment

Joe Ravetz, Manchester University ~ Foreword by Michael Meacher

City-Region 2020 offers a vision, a direction and a means of travel towards the future in human settlements. Based on possibly the most comprehensive and detailed case study project ever undertaken on sustainable development for a city or region, this pioneering study translates principles into practice for the post-industrial conurbation of Greater Manchester. It provides a framework for integrated strategic management of the entire city-region, and demonstrates new methods and tools for sustainability indicators, appraisal, mapping and accounting, for use anywhere in the western world.

This valuable manual presents: a 25-year horizon for the restructuring of the urban system: technical scenarios for land-use, energy and material flows; spatial analysis of settlement types; a framework for linkages between economy, society and environment; lateral thinking on cultural and informational trends; and practical actions for government, business, third sector and the public. Practitioners, policy makers, campaigners and researchers will find this a unique landmark for the new urban and regional agenda.

 Running the City-Region
 Summary & Next Steps

'This detailed analysis of a long-established metropolitan area illustrates the extraordinary challenge of knowing and understanding major cities, and of anticipating and guiding their future evolution'

From the Foreword by
Michael Meacher MP
 UK Secretary of State for the Environment

'Joe Ravetz and his colleagues have just published what can be considered to be a model for the planning of a region or city-region according to the principles of sustainable development'

Peter Roberts,
 Chair of the Town & Country Planning Association
