Abstract

1 Introduction

Hello I'm some text inside the document. When I am writing text latex will not see spaces or new lines unless I tell it. To get a new paragraph, I need to leave a blank space.

Like that!

2 Method

2.1 My Second Method

I can write mathematics inline using one dollar sign at each end like this $ax + by = 0$.

Let's say I have a more complex equation with more terms like

$$ax + by + cz + d^2 = 0,$$

then it still forms part of the sentence.

We can also use the equation environment to get a number by the side of the equation, like this:

$$ax + by + cz + d^2 = 0. \tag{1}$$

I can now refer to the equation as (1) or manually put paranthesis round like this (1).

2.2 My First Method

3 Results

Now let us show the results using the method in Subsection 2.1.
